

Is Your Farm's Web site Cell Phone Friendly?

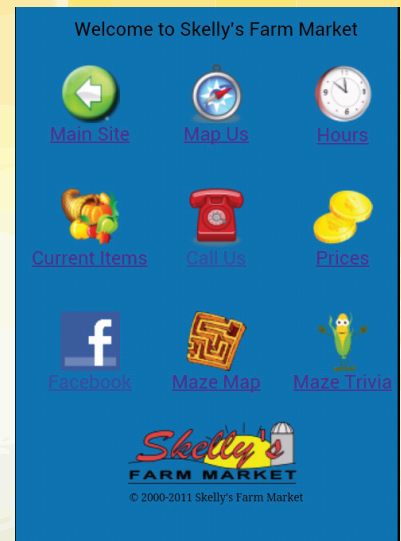

Your farm has a web site, but how many people visit it from a mobile phone? Mobile phone usage is growing exponentially, and people want to find information on the go. Most smartphones today will let a mobile user load your web site. Unfortunately, your beautiful web site will be shrunk to an area the about the size of a business card with text too small to read.

A normal web site is too small for a user to read without zooming in and scrolling.

Not convinced that customers visit your web site from a mobile phone? Consider this:

- As of September 1, 2011, Nielsen reported that 40% off all cell phones are now smartphones.
- 59% of 2011 Q3 cell phones sold were smartphones
- More smartphones are now sold each year than computers

A special mobile page loads fast and gives customers the information they need quickly.

How does a mobile web site work?

In most cases, a mobile web site is hosted right along side your regular web site so there are no additional yearly fees. When a visitor goes to your home page from a mobile phone, they are automatically redirected to your mobile page. The mobile site is just a few extra pages on your regular web site that are designed to use a small screen. It also loads fast with small pictures since some phones do not get fast internet.

Let Corn Mazes America design a mobile web site for you today. We will format a great looking site to help your mobile users. When we are finished, you will be able to monitor all future changes and there will be no extra fees. Setup fees start at just \$100 for a mobile web site. Call 608-352-0175 for details and a free consultation.
